

TRAINEE PROGRAM OPERATIONS / PRODUCTION

During the biennial program the trainees work in different cross-functional and cross-departmental stations, which are related to their special interests and strengths. In this connection production, logistic, controlling, engineering and quality management are very important. In an intensive "training on the job", the trainees contribute to projects. As an example they support other workers in production planning and control and monitor and develop different production processes.

After the expiration of the program, the trainees are presumably retained in an adequate department.

Apprenticeship
